

# IT Manager

An IT Manager is responsible for the installation and maintenance of a company's systems and infrastructure. They evaluate future needs and improvements in the business and coordinate suppliers, manage the security and resilience of the data and ensure staff use systems appropriately.

Our IT Manager helps you take control of your technology providers, allowing you the benefit of having your own in-house skilled IT team. We will ensure your support is fit for purpose and evolving in line with your business growth, and not just responding to calls to fix day to day issues. We will:

- Manage your IT and technology service providers
- Help you find suitable technologies and suppliers
- Get you the best deals and support

As Independent Technology Advisors we are not tied to any suppliers or products providing you confidence that you will get what is best for your business.

The IT Manager is an ideal solution for growing and ambitious businesses who are not yet at a stage where they can employ full time in-house IT skills.

Within 12 months the IT Manager should have generated good working relationships with technology partners and appropriate support and controls, enabling your business to make the best use of your current technologies.

Contact us to find out how our IT Manager can transform your business.
